

Recommendation rules on the same observations

PIQA · Unit-cost 10% budget · Batch size 16 · Fixed Gittins allocation

Default prior: $N(0.5, 0.04)$

Dataset prior: $N(0.4, 0.02)$

--- Posterior mean — Mean $- 5 \times$ variance — Finite-row Gaussian $z = 1.645$
— Variance gate $p = 0.1$ — Gaussian LCB $z = 1.645$ — Anytime finite-population LCB

Regret averages eligible recommendations; abstentions stay missing. Bands: 95% seed-block bootstrap intervals (1,000 draws; 5 fixed matrices; 20 sampling seeds). Coverage is the fraction of runs recommending. No dataset resampling.
